NOW AVAILABLE!

Another OLE Innovation

Safely Install Cat® 789 & 793 Steering Cylinders

- **Handle cylinders safely**
- **Reduce install time**
- **Easy To use**
- **Durable**
- **Completely mobile**
- **Optional casters available**
- **Multiple applications**

Open loop Energy, Inc.

By “partnering” with an Open Loop, Inc. mining customer, a unique device was designed and built to address particular problems incurred when installing Cat® 789 and 793 steering cylinders.

Problem

- Steering cylinders are located in a difficult place to access with conventional means i.e. forklift, overhead crane, etc.
- These cylinders are heavy and awkward to handle.
- Positioning the cylinders for installation is dangerous without rigid control of the cylinder during attachment to the truck.

Solution

Open Loop Inc. worked with a customer and built a device that would solve all the installation problems. Reducing physical risk and reducing installation time

OLE is now offering this time saving tooling for safer, faster installations to other customers. Contact your Customer Sales Representative for detailed information.
